

# The Last LMS You'll Ever Purchase

We've developed an LMS that tackles the industry's biggest problems while boosting your brand and making life easier for you and your learners.

Our configurable interface allows features and functions to be switched on or off as your organization grows and changes. And if you need a solution that simply doesn't exist in the marketplace, we'll build it for you.

Over the past 20 years, we've created LMSs that look like no LMS you've seen. They blend seamlessly into clients' websites, becoming undetectable, powerful learning machines that help organizations become smarter and more profitable.

We work with you to build an LMS that you can't find anywhere else, but that doesn't mean it's overly expensive or overly complicated. We assign a group of developers, support technicians, and project managers to you to ensure that the LMS is built to your specifications, with no stress, confusion, or added work for your busy team.

Dedicated support specialist assigned to every project

Centralized platform with engaging user interface supports blended learning and highlights training resources

Self-registration and single sign-on, next-up courses, and easy-to-use training catalog

Dashboard reporting for fast and easy access to standard and customized reports

Custom integrations with your HRIS, payroll system, eCommerce, social media, and CRM

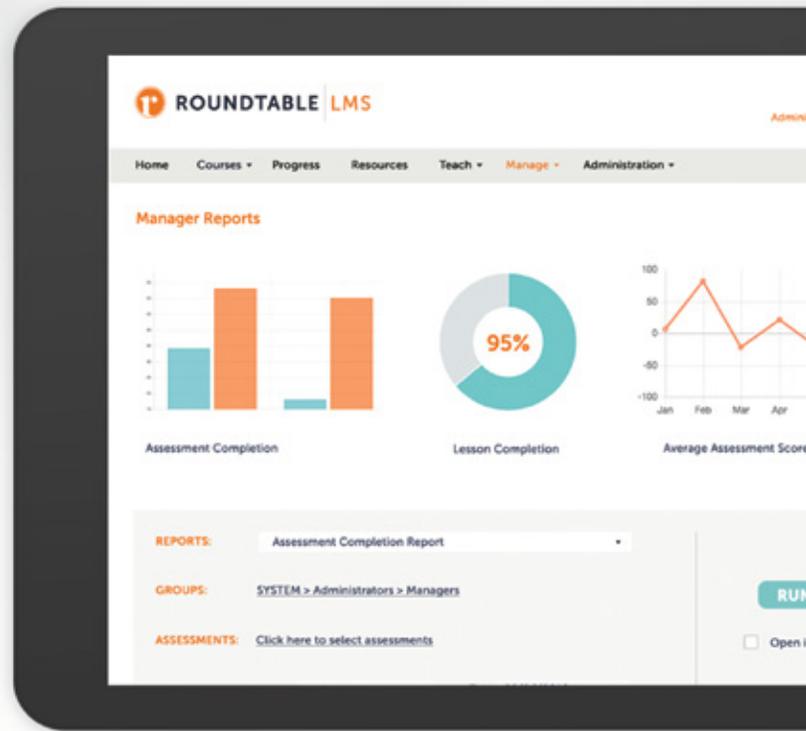

Multi-language capabilities to serve your global learners

# The Last LMS You'll Ever Purchase

## Roundtable LMS Features

Say goodbye to the headache of implementing a new LMS every time your contract expires. Our configurable interface allows features and functions to be switched on or off as your organization grows and changes, ensuring that Roundtable's LMS is the last you'll ever need to purchase.

- ✓ Offline Learning
- ✓ SSO & Self-Registration
- ✓ Course Catalog
- ✓ Resources & Job Aids
- ✓ Video Conferencing
- ✓ Standard & Custom Integrations
- ✓ Continuous Support
- ✓ Robust Reporting
- ✓ Intuitive UI/UX

# Our LMS Implementation Process

When you partner with Roundtable Learning for a configurable LMS, you don't need to hire an implementation specialist to introduce your LMS to your organization. Implementation is part of our process and our solution. We'll guide you through a comprehensive set-up process, ensuring that you and your learners will get the most out of your new Roundtable LMS.

## STEP ONE: PROJECT KICKOFF

We'll assign you a project manager, a technical support specialist, and a learning solutions advisor. Then, we build a project site on shareable project management software so that you can watch us build, configure, and implement your LMS in real time. We'll create milestones and outline deliverables.

## STEP TWO: ACCESS AND PERMISSIONS

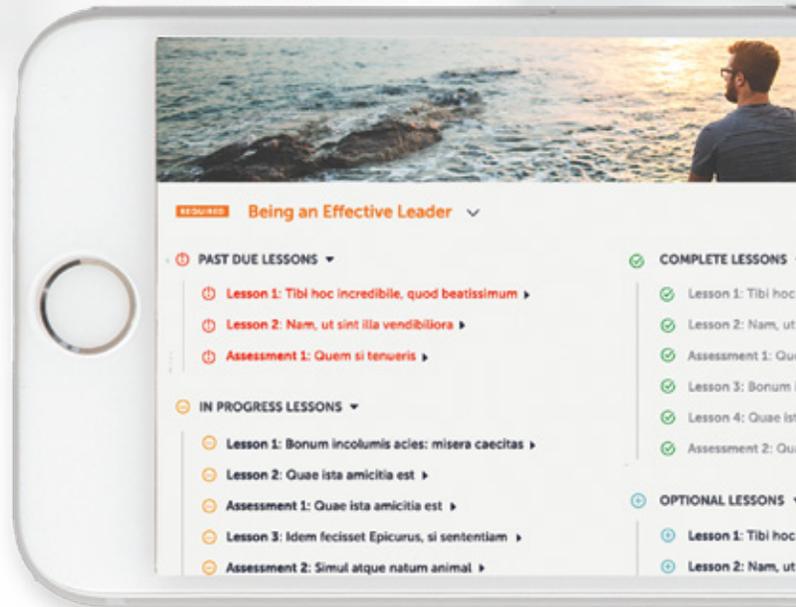

Here's where you'll help us understand exactly who will be using your new LMS and how they'll be using it. We'll create job roles, users, administrators, and more.

## STEP THREE: DATA MIGRATION

We'll handle the migration of your current content, including video, SCORM files, PDFs, Powerpoints, and more. We'll also transfer your user history.

## STEP FOUR: BRANDING AND CONFIGURATION

We'll brand the LMS using your colors, logos, images, and videos. We'll also configure the features and functions of the LMS to your liking. A few of the configurable elements include: Discussions and Conversations, Company Spotlight, Upcoming Events, Social Media Connections.

## STEP FIVE: REPORTING

In addition to our full suite of reporting, we'll build two additional custom reports and set up automated reporting and messaging for you. During this step, we'll migrate your resource documents and build your Resource Library.

## STEP SIX: TRAINING

Prior to launch, we'll train your LMS managers and administrators on the new system. We'll build custom manuals and create quick-guides for your unique LMS, then provide unlimited support for 30 days post-launch.

## STEP SEVEN: SUPPORT

Support shouldn't disappear after implementation. We offer a free 30 days of unlimited support post-launch. You'll receive a direct phone number and email address for technical support, and you can purchase flexible support bundles as you go.
